EXCEPTIONAL DENTAL ACADEMY

ONE SYDNEY COHORT

MASTERING SURGICAL EXTRACTIONS

Two hands-on days led by Dr Thao Truong, Specialist Oral Surgeon.

SYDNEY Fri 4 & Sat 5 Dec 2026

ACDP Chatswood · 9:00am – 5:00pm

OVERVIEW

> **You take teeth out already. You want the surgery to go to plan.**

A practical two-day course for general dentists with basic extraction experience. Surgical anatomy, medical risk, imaging and case selection, flap design, bone removal, sectioning, root retrieval, wisdom teeth, minimally traumatic extraction and complications, with a substantial hands-on component on surgical models and sheep heads. No prior surgical training needed.

Dr Thao Truong

SPECIALIST ORAL SURGEON · COURSE LEAD

First Class Honours in Medical Science and Honours in Dentistry at the University of Sydney, followed by four years of specialist Oral Surgery training at Sydney Dental Hospital and a Doctor of Clinical Dentistry in Oral Surgery. Principal practice at Sydney Specialist Oral Surgery in Crows Nest. Senior Lecturer and Clinical Educator at the University of Sydney School of Dentistry.

What you'll be able to do by the end of day two

01 Assess surgical difficulty
And recognise when referral is the appropriate call.

02 Identify risk factors
The anatomical, medical and radiographic factors that change the plan.

03 Plan and perform the extraction
Appropriate flap design, bone removal, tooth sectioning and closure.

04 Select the right instruments
And use surgical handpieces and burs properly.

05 Manage fractured and retained roots
Using a structured approach rather than improvising.

06 Assess third molars
And determine GP versus specialist management.

07 Extract minimally traumatically
Where preserving the socket for a future implant matters.

08 Manage the socket and wound
The principles of socket and wound management.

09 Handle complications
Recognise, prevent and manage the common ones.

DAY ONE

Foundations of Surgical Extractions

8:30am	**Introduction & Course Overview** Course learning objectives, the principles of safe surgical extraction, and the limits of surgical treatment within general practice.
9:00am	**Surgical Anatomy for the General Dentist** The anatomical structures most relevant to extraction surgery, and how anatomy shapes planning, technique and risk.
9:45am	**Medical Considerations** A systematic approach to medical risk: ASA classification, anticoagulants and antiplatelets, diabetes, cardiovascular disease, immunosuppression, renal and hepatic disease, pregnancy, smoking, allergies, antiresorptive and antiangiogenic medications, MRONJ risk, steroid use, antibiotic prophylaxis, and recognising patients better managed in a hospital or specialist setting.
10:45am	**Morning break**
11:00am	**Imaging, Risk Assessment & Case Selection** When to use periapical imaging, OPG and CBCT. Assessing root morphology, surrounding bone, surgical access and high-risk anatomy, and predicting surgical difficulty. Most importantly, deciding: treat or refer?
11:45am	**Surgical Principles & Instrumentation** Surgical setup and the proper use of elevators, luxators, forceps, surgical handpieces, burs, irrigation, retractors and root picks. Controlled force, creating a path of withdrawal, and avoiding unnecessary trauma.
12:30pm	**Lunch**
1:15pm	**From Simple to Surgical Extraction** When and how to convert a conventional extraction to a surgical approach: incision and flap design, mucoperiosteal flap elevation, bone removal, purchase points, tooth sectioning, root separation, fractured-root retrieval, and choosing the right handpiece and bur.
2:15pm	**Socket & Wound Management** Socket inspection, debridement, irrigation, haemostasis, flap repositioning, suturing and post-operative instructions.
2:45pm	**Clinical Demonstration** A step-by-step surgical extraction demonstrating the principles covered through the day.
3:00pm	**Hands-on: Surgical Extraction Fundamentals** The full sequence worked through on surgical models and animal tissue. Flap design, flap elevation, bone removal, tooth sectioning, root retrieval, socket management, suturing.
5:15pm	**Case Discussion: Would You Take This Tooth Out?** An interactive series of clinical and radiographic cases pulling together medical status, anatomy, imaging, difficulty assessment, surgical planning and referral thresholds.

DAY TWO

Wisdom Teeth, Minimally Traumatic Extractions & Complications

8:30am	**Wisdom Teeth: Assessment & Case Selection** A systematic framework for assessing third molars: indications for removal, eruption and impaction patterns, predicting surgical difficulty, inferior alveolar nerve assessment, coronectomy principles, CBCT indications, maxillary sinus considerations, and GP versus specialist management.
9:30am	**Surgical Removal of Third Molars** Flap design, bone removal and tooth sectioning strategies for mandibular and maxillary third molars. Avoiding excessive surgical force, and inferior alveolar and lingual nerve considerations.
10:30am	**Morning break**
10:45am	**Ridge Alterations & Minimally Traumatic Extractions** What happens to the alveolar ridge after extraction, and how technique influences future restorative and implant treatment. Preserving the buccal plate and soft tissue, periotomes and luxators, sectioning multi-rooted teeth, ankylosed and fractured roots, and extracting when an implant is planned.
12:15pm	**Lunch**
1:00pm	**Clinical Demonstration** A wisdom tooth and a minimally traumatic extraction, highlighting surgical planning, controlled bone removal, tooth sectioning and preservation of surrounding structures.
1:45pm	**Hands-on: Advanced Extraction Techniques** Surgical models and sheep heads. Bone removal, tooth sectioning, fractured root retrieval, third molar techniques, minimally traumatic extraction, handpiece use, flap management and suturing.
3:15pm	**Break**
4:00pm	**Complications: Prevention & Management** Persistent bleeding, root fracture, tuberosity fracture, oroantral communication, root displacement into the sinus or soft tissues, inferior alveolar and lingual nerve injury, dry socket, post-operative infection, trismus, soft tissue injury, mandibular fracture, and aspiration or swallowing of surgical materials.
5:00pm	**Key Takeaways & Course Close** Consolidation of the two-day surgical workflow, interactive discussion and final Q&A.

THE COMPLETE SEQUENCE, START TO FINISH

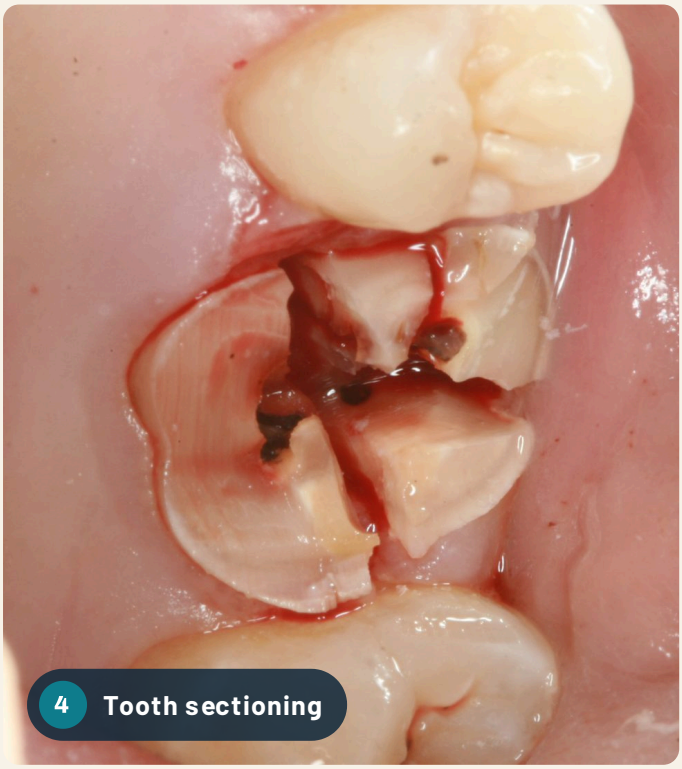

The whole surgical extraction workflow, in the order you meet it chairside.

1. **ASSESS** — Medical & Radiographic Assessment
2. **ACCESS** — Flap Design
3. **EXPOSE** — Bone Removal
4. **DIVIDE** — Tooth Sectioning
5. **RETRIEVE** — Root Retrieval
6. **CLOSE** — Wound Closure
7. **MANAGE** — Complication Management

SURGICAL MODELS AND SHEEP HEADS

A substantial part of both days is practical. Teeth are prepared and fractured in selected exercises so you can practise structured root retrieval in a controlled environment.

- ✓ Surgical incision and flap design
- ✓ Soft tissue retraction
- ✓ Tooth sectioning
- ✓ Root retrieval
- ✓ Surgical handpiece techniques
- ✓ Minimally traumatic extraction
- ✓ Suturing and wound closure
- ✓ Mucoperiosteal flap elevation
- ✓ Bone removal
- ✓ Creation of purchase points
- ✓ Management of fractured roots
- ✓ Third molar surgical principles
- ✓ Socket inspection and management

4 Tooth sectioning

5 Bone removal & root retrieval

OPERATE WITH A PLAN. BOOK YOUR SEAT.

WHO IT'S FOR

General dentists with basic extraction experience who want to improve their surgical confidence, technique and case selection. You do not need prior surgical training.

DATE & VENUE

Sydney · Fri 4 & Sat 5 December 2026
The Australasian College of Dental Practitioners, Chatswood

TIME

9:00am – 5:00pm both days

INVESTMENT

A$2,200.00 + GST per attendee

COURSE DETAILS

Format	**2 days · hands-on**
Dates	**Fri 4 & Sat 5 December 2026**
Schedule	**9:00am to 5:00pm**
Venue	**ACDP · Chatswood, Sydney**
You'll work on	**Surgical models & sheep heads**

Refunds available up to 7 days before the course.
