EXCEPTIONAL DENTAL ACADEMY

EXCEPTIONAL PORCELAIN VENEERS

Two days. Fully hands-on. You prep 12 teeth.

Presented by Dr Aodhan Docherty & Dr Kamran Ashraf
with guest lecturers on the floor at every cohort

HOBART

17-18 October 2026

PERTH

24-25 October 2026

BRISBANE

21-22 November 2026

OVERVIEW

Porcelain veneers, turned into a system you can repeat.

Diagnosis, preparation, bonding and occlusion, distilled into a step-by-step workflow you can run on the cases walking through your door on Monday. This is not a lecture course. Both days are structured around you doing the dentistry, with hands-on work on models throughout.

Dr Aodhan Docherty
EDA CO-FOUNDER

University of Sydney graduate with honours and a University Medal, and an alumnus of the Kois Academy. Graduate Diploma in Oral Implants and co-author of "Practical Procedures in Implant Dentistry".

Dr Kamran Ashraf
EDA CO-FOUNDER

Sydney-based clinician and educator with advanced postgraduate training in prosthodontics and periodontics, and a Fellow of the Royal College of Surgeons of Edinburgh.

Ten things you'll be able to do on Monday

01 Consultation & case acceptance

A structured new-patient assessment that improves conversion, ethically, without pressure.

03 Motivational mock-ups

Validate the case, communicate visually, and manage expectations before you prep.

05 Preparation design

Type I to Type IV preparations, elbow preps, and margin strategies for every case type.

07 Impression techniques

Analogue vs digital workflows, when to scan, when to take a PVS.

09 Temporisation

Three predictable methods for ultra-cleansable, soft-tissue-stable temporaries.

02 Smile design principles

Translate facial, dental and gingival parameters from 2D into a predictable 3D result.

04 Material biochemistry & IDS

Silica vs non-silica surface treatment, immediate dentine sealing, and why each matters.

06 Soft tissue management

Surgical and non-surgical crown lengthening, plus black-triangle management.

08 Occlusion concepts

The occlusal philosophies that decide whether your veneers last.

10 Cementation protocols

Isolation, retraction, resin cement selection, and when to bond versus lute.

DAY ONE

Diagnosis, Design & Preparation

9:00 – 10:00am

The Consultation Process

A structured approach to new patient assessment for aesthetic cases, including comprehensive extra oral and intra oral examination, accurate record acquisition through photography, digital scanning or analogue impressions and radiographic analysis. The session focuses on effective case presentation, ethical case selection and strategies to improve case acceptance and treatment conversion.

10:00 – 11:00am

Smile Design

An in depth exploration of universally accepted smile design principles, facial, dental and gingival parameters and how these influence aesthetic outcomes. Emphasis is placed on translating two dimensional concepts into predictable three dimensional results and clearly communicating the design to both patients and the laboratory.

11:00am – 12:00pm

Motivational Mock-up

A comprehensive lecture on the role of the motivational mock-up in aesthetic dentistry. Topics include case assessment, diagnostic validation, visual communication with patients, expectation management and confident case acceptance.

12:00 – 12:30pm

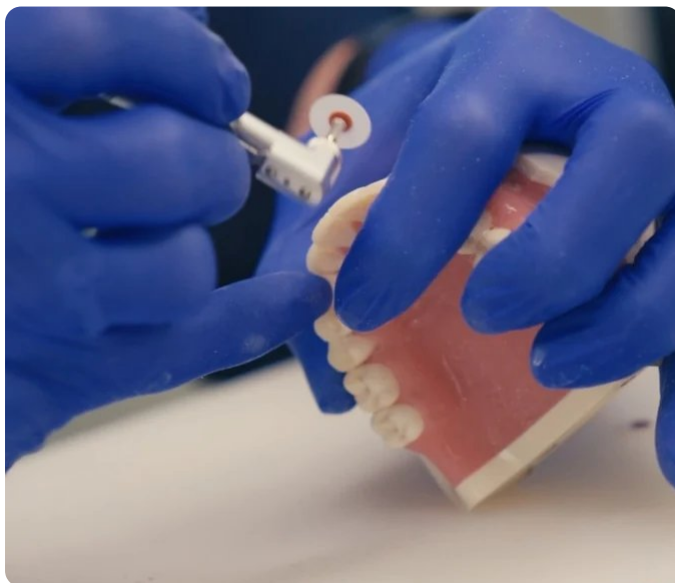

Material Science

A focused review of contemporary ceramic materials and their clinical application in the aesthetic zone, including considerations for strength, translucency and bonding strategy.

1:30 – 5:00pm

Preparation Part 1

An introduction to preparation planning and reduction control using both analogue and digital workflows. The session covers Type I additive and Type II reductive veneer preparations, with an emphasis on enamel preservation and precision.

DAY TWO

Preparation, Tissue, Temporis & Bond

9:00am – 12:00pm

Preparation Part 2

An advanced session covering Type III and Type IV complex preparation scenarios including cant correction, diastema management and crowding. The focus is on controlling tooth position, symmetry and emergence profile through precise preparation design, while maintaining biological and aesthetic integrity.

12:00 – 1:00pm

Soft tissue management

A comprehensive exploration of the biological principles underpinning successful aesthetic dentistry. Topics include predictable soft tissue management, supra and subgingival contouring strategies, use of contouring guides, laser and conventional surgical approaches, gingival architecture, management of biological width and indications for crown lengthening.

1:00 – 1:30pm

Scanning / Impression techniques

A detailed comparison of conventional impression techniques and digital workflows. This session examines the advantages and limitations of analogue versus digital approaches, along with a practical overview of current intraoral scanners available on the market and their clinical applications.

1:30 – 2:30pm

Temporisation

A focused session on temporisation strategy and execution, covering when temporisation is indicated and how to provisionalise predictably without compromising soft tissue health. Emphasis is placed on achieving adequate retention, durability and consistency, allowing clinicians to minimise breakage and work with confidence throughout the provisional phase.

2:30 – 3:30pm

Cementation / Bonding

Step by step overview of veneer delivery, including marginal integrity assessment through dry fit, trial insertion for patient and clinician approval, interim photography, isolation techniques, decision making around luting versus bonding and efficient excess cement removal to optimise marginal outcomes.

3:30 – 4:30pm

Occlusion

A clinically focused session exploring the role of occlusion in porcelain veneer longevity and predictability. The discussion covers traditional and contemporary occlusal concepts, how to assess functional risk in aesthetic cases and how to manage occlusal forces to minimise chipping, debonding and long term failure. Emphasis is placed on practical assessment and adjustment strategies that can be implemented immediately in clinical practice.

4:30 – 5:00pm

Review and Social Media

Case review, documentation and guidance on ethical and effective use of social media in aesthetic dentistry.

FOUR SUPERVISED EXERCISES

Over the two days you complete four exercises with an educator at your bench giving live feedback.

01

Prescribe smile designs across five cases

Work through five real patient cases, diagnosing, planning and prescribing the design for each.

02

Fabricate custom putty keys

Build incisal reduction, B-plane reduction and ideal mock-up keys from scratch.

03

Minimal prep with the APT technique

Prepare 12 maxillary teeth covering Type I through Type IV preparations, using the Aesthetic Pre-evaluative Temporary technique.

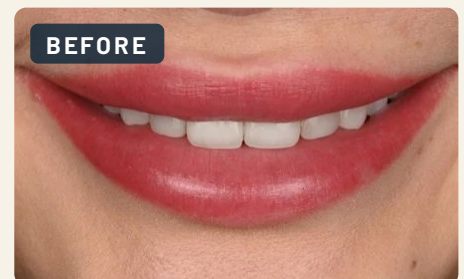

04

Advanced temporisation

Produce ultra-cleansable temporaries focused on soft tissue stability, durability and ease of maintenance.

BEFORE & AFTER

FEEDBACK YOU CAN'T MANUFACTURE

★★★★★

Three degrees can change everything

"They might see you angling your bur three degrees too much, that can make all the difference in the world."

Dr Carlos Nakhla · EPV Sydney

★★★★★

Confidence from A to Z

"I have the confidence to talk to a patient and go from A to Z with no hesitation."

Dr Michael Atta · EPV Sydney

★★★★★

They have thought through what can go wrong

"The mentors have already thought through everything that will go wrong or right, that thought process made a lot of sense and I want to bring it back home."

Wan Ting · EPV Singapore

READY TO PLACE YOUR NEXT VENEER CASE?

WHO IT'S FOR

If you're comfortable with crown and bridge, you're ready. No prior veneer experience needed. Cohorts include dentists placing their first veneers alongside dentists refining an existing workflow.

DATES & VENUES

Hobart · Sat 17 & Sun 18 October

Perth · Sat 24 & Sun 25 October, Four Points by Sheraton

Brisbane · Sat 21 & Sun 22 November

TIME

9:00am – 5:00pm both days · CPD-aligned

20% OFF Pacific Smiles & Impression dentists

Use code **PACSMILES20** at checkout

WHAT'S INCLUDED

- ✓ Two full days of hands-on instruction
- ✓ All typodonts & consumables
- ✓ Small-cohort faculty ratio
- ✓ EPV course booklet & protocols
- ✓ Lunch & refreshments both days
- ✓ Certificate of attendance
- ✓ CPD hours statement
- ✓ Post-course faculty support

Full refund up to 30 days before your course date, 50% within 30 days.
